- Open by pressing the control knob.
- Select temperature by turning the control knob.
- Timed automatic shut-off after ~7 seconds for basins (+/- 3 seconds according to the European standard EN-NF 816) and ~30 seconds for showers (+5/- 10 at 3 bar according to the European standard EN-NF 816).
- The products have been designed to withstand both thermal and chemical shocks in line with current regulations.
- Recommended pressure: 1 - 5 bar.

INSTALLATION

- **Do not remove the non-return valves built into the water inlets (essential).**
- Fit the connection filters, in the same way as indicated in the instructional images. Their function is to protect the non-return valves and keep them in place.

THE INSTALLER MUST ENSURE:

- THE SEAL AROUND THE RECESSING HOUSING IS WATERPROOF TO PREVENT ANY INGRESS OF WATER;
- ANY WATER ACCIDENTALLY ENTERING THE RECESSING HOUSING (E.G. CONDENSATION, RUN OFF, LEAKS, ETC.) HAS AN EXTERNAL DRAINAGE POINT TO PREVENT ANY STAGNATION;
- THE INTEGRITY OF THE SEALS BETWEEN THE STAINLESS STEEL WALL PLATE AND THE WALL OR THE WALL PLATE AND THE MIXER AT LEAST ONCE A YEAR, AND MAKE GOOD IF NECESSARY.

If this advice is not followed, water may leak into the wall.

DELABIE cannot be held responsible for any ingress.

UK: 01491 821821. **ALL OTHER MARKETS:** +33 (0)3 22 60 22 74.

FLOW RATE ADJUSTMENT (Fig. 1.I or 2.D or 3.G or 4.H or 5.G)

- The flow rate is pre-set at the factory at 3 lpm at 3 bar pressure for basins, it can be adjusted.
- Shower kits are equipped with ROUND or TONIC JET shower head and the shower panels are set at 6 lpm at 3 bar.
- The shower mixers are pre-set at 12 lpm at 3 bar.

REMEMBER

- **Our mixers must be installed by professional installers** in accordance with current regulations and recommendations in your country, and the specifications of the fluid engineer.
- **Sizing the pipes correctly** will avoid problems of flow rate, pressure loss and water hammer (see calculation table in our brochure and online at www.delabie.com).
- **Protect the installation** with filters, water hammer absorbers and pressure reducers to reduce the frequency of maintenance (recommended pressure from 1 to 5 bar maximum).
- **Install stopcocks** close to the mixer to facilitate maintenance.
- The pipework, filters, non-return valves, stopcocks, bib taps, cartridge and all sanitary fittings should be checked at least once a year, and more frequently if necessary.

We recommend checking the following parts annually:

- **Non-return valves and filters:** descaling and replacement of worn or damaged parts.
- **Interchangeable cartridge:** de-scale internal parts, and replace any worn or damaged parts.

MAINTENANCE & CLEANING

- **Cleaning chrome and stainless steel:** do not use abrasive, chlorine or any other acid-based cleaning products. Clean with mild soapy water using a cloth or a sponge.
- **Frost protection:** drain the pipes and operate the mixer several times to drain any remaining water. In the event of prolonged exposure to frost, we recommend taking the mechanisms apart and storing them indoors.

After Sales Care Support:
